

Christmas Reef Making

What you need: bare and flexible branches or metal wire, string, green leaves and branches, and any additional decorations you want (ribbon, Ivy, bells, lights, pine cones etc.)

1. Collect some green plant cuttings and branches to make your reef.
2. Make your frame using either some branches or wire. Bend the branches into a circle and tie them together. You want to tie lots of knots across the frame and have different branches over lapping, to make a strong shape.
3. Then tie on and weave in your green branches and leaves to the frame so it starts to bulk out, followed by any other decorations you want to add. You can also tie on a loop with your string if you want to hang it up.
